Where equations define the equality between two or more mathematical elements; inequalities provide us with the chance of exploration when two quantities are not equal in value but are comparable in nature. An equation makes use of the “equal to (=)” symbol to express the relationship of equality between two quantities. Inequalities make use of the “greater than (>)” and “less than (): We use “greater than” when one quantity is more than the other quantity. For example, 7 mangoes are more than 3 mangoes is mathematically expressed as 7 > 3. Less than (Inequalities > Inequalities Symbols Finish!! Please allow access to the microphone Look at the top of your web browser. If you see a message asking for permission to access the microphone, please allow. Close Introduction to InequalitiesThis is an introductory lesson to inequalities which starts by looking at what "equal" means. The inequality symbols are introduced gradually with clear instructions and lots of opportunities for students to practice skills. The main task with number lines is a Tarsia jigsaw (this one took a while to make - I hope you like it!).Inequalities on number lines Tarsia Who are these worksheets for? This pack is suitable for learners aged 5-7 years old or 1st and 2nd graders (USA). The content covers fact files and relevant basic and advanced activities involving inequality symbols. What is Citizenship Day? September 17 is the celebration of Citizenship Day! The Founding Fathers signed the U.S. Constitution this day, on year _____! Write the correct inequality symbol for the 2 groups of people. What are Inequality Symbols? Download Inequality Symbols (Citizenship Day Themed) Worksheets Math Worksheets This is a fantastic bundle which includes everything you need to know about inequality symbols across 17 in-depth pages. These are ready-to-use Common core aligned 2nd graders Math worksheets. Each ready to use worksheet collection includes 10 activities and an answer guide. Not teaching common core standards? Don’t worry! All our worksheets are completely editable so can be tailored for your curriculum and target audience. Resource Examples Click any of the example images below to view a larger version. Resources & Worksheets Included Ages 5-6 (Basic) 1st Grade Which Group of AttendeesCitizen For How Long?We’re Good CitizensDebate For AwarenessBill of Rights Ages 6-7 (Advanced) 2nd Grade Popularity VoteCurrency ContestLandmarksPlaywrightsCensus For The Village Analyze boundaries:For situations where exact equality is not achieved, inequalities can help students assess boundary values of the required result. Even though students do not get the precise result, they can identify upper or lower boundaries.Flexibility in prediction:This leaves room for flexibility for scenarios where changes might occur, therefore lowering the possibility of error that may have been generated from the prediction of a fixed outcome.Real world application: Solving inequalities worksheets can show students how these boundaries and predictions can be implemented in our daily lives through mathematical solving of linear inequalities.While solving simple inequalities or linear inequalities in mathematics, there are four possible results for the comparison of the left-hand side (LHS) to the right-hand side (RHS) of an inequality sign: Less than (): LHS is always greater in value than RHS Greater than or equal to (?): LHS is greater or equal in value to RHSStudents are provided with real-life examples and can learn to solve inequalities through these worksheets.Example:Ravi was asked to buy a maximum of 80 chocolates. These chocolates are sold in packets, each of which contains 12 chocolates. Find the number of packets he needs to buy to satisfy the requirement.Solution:Assume that Ravi has to buy x number of packets to meet the requirements. Each packet contains 12 chocolates.Thus we can write the above problem in the form of linear inequality as:12 * number of packets < 80Or,12x < 80=> 12x/12 < 80/12 (Dividing both sides with 12)=> x < 20/3Therefore the number of packets Ravi needs to buy to meet the requirement is 20/3. Or, x < 6.66 (as 20/3 is equal to 6.66)Because the number of packets cannot be in a fraction, we must round it up to 6 packets. This is how a scenario can be represented in the form of inequalities.Inequalities can be solved by either of the following methods:Addition or subtraction of the same number from both sides of the inequality sign without altering the signMultiplication or division of the same non-zero positive number to both sides of the sign. In the case of multiplication or division with a negative number, the inequality sign will be reversed.Printable Solving inequalities WorksheetsSolving inequalities worksheets can be downloaded or printed so students can practice with them at their own pace and convenience. The printable worksheets contain varying levels of difficulty, from simple inequalities to more complex ones, to assist students in understanding this concept.
